

hotelmercury.jp

浅草橋ホテルガイド — build, structure, and the content plan that makes it a working booking-affiliate site

Prepared for Jon Ng · 23 September 2026

Local build, not yet deployed. Preview served from `dist/`.

Source: `server-build/apps/hotelmercury/`

1. Summary

The domain is a good asset being used in a way that guarantees it cannot rank. hotelmercury.jp currently serves a scraped copy of a hotel's old official website. That hotel is still trading under new management, with its own live official site. Google has one brand entity to attribute, and it does not attribute it to us.

The rebuild keeps everything genuinely useful about the old site — the rooms, the access data, the neighbourhood — and drops every claim to *be* the hotel. It goes live as an independent Asakusabashi stay guide that reviews the property and books it through affiliate links. That is both the honest position and the only position with a ranking path.

13

pages built, 178 KB total

44

booking links, all from one code

0

databases, plugins, PHP processes

2. What is wrong with the site today

2.1 It is a Wayback Machine Downloader rip, and it shows

Only four pages on the live domain are real. `/access/`, `/areaguide/`, `/restaurant/` and `/page9596/` return the scraping vendor's own advertisement:

The DEMO version only includes 4 pages:

`http://hotelmercury.jp` `/contact.html` `/en.html` `/guide.html`

Visit `https://www.waybackmachinedownloader.com/...` to buy a fully functioning site.

Google indexes those pages. Four of the site's eight URLs are an advert for a scraping tool.

2.2 It claims to be a business that someone else operates

The property trades today as **Tabist ホテルマーキュリー 浅草橋**, with a live official site at **hotelmcury.info** and listings on Jalan, Booking.com, Agoda, Trivago and Yahoo Travel. Our page still carries the title 「公式サイト」, the hotel's phone and fax numbers, and its `reserve@` address.

2.3 Every booking button sends the customer — and the commission — elsewhere

All reservation links point at `sec.489.jp/v3/...?group_id=41&hotel_id=56`, the previous operator's own booking engine: plan list, member registration, my-page, cancellation, enquiry. Any booking made through the site today earns us nothing and creates an obligation we cannot honour.

2.4 Nothing to rank for

Eight brochure pages of duplicate text. The only keyword the site targets is the brand name, which is the one keyword it cannot win.

Consequence. Stripping the identity claims is not a legal footnote added to the redesign — it is the redesign. Google's expired-domain and deceptive-identity policies target exactly this pattern. Fixing the design without fixing the identity would produce a prettier page with the same ceiling.

3. The position we are taking

Decision	What it means in the build
Independent guide , not an official site	New brand 「浅草橋ホテルガイド」. Copy is third person throughout — "the hotel is...", never "our hotel". No 公式 anywhere in a title, heading or social preview.
No contact impersonation	The hotel's phone, fax and email are gone. So are all member-area and reservation-engine links. We cannot take a booking, and the site says so.
Disclosure on every page	Footer states we are not the operator and that booking buttons are affiliate links. Every CTA carries a 広告 label, which Japan's ステマ規制 requires.
Keep what is useful	Room types, facilities, access times, area knowledge — all retained and rewritten, because that is what a traveller actually searches for.
Monetise through Travelpayouts	Same account and marker as the shibuyahotel hotel pages, with its own per-property sub-marker.

4. What has been built

A static site — no CMS, no database, no PHP. Fifteen HTML files generated from one Python script, copied to the server as plain files. It cannot be hacked through a plugin, it cannot go down because a database is busy, and it loads in well under a second.

4.1 Structure

The homepage is a single hotel page with anchored sections, in the same order as the shibuyahotel subdomain builds (hotelindigo, bookteabed, alldayplace):

```
/ → hero
  #information  the property, key facts table
  #book         Booking.com search widget
  #guestroom    3 room types, one booking button each
  #restaurant   in-house dining + the neighbourhood's izakaya
  #facility      what is in the building
  #access       airports and major stations
  (direct book card)
  #sightseeing  distances to Asakusa, Skytree, Akihabara, Ryogoku
  #shopping     the doll shops and the wholesale district
  #faq          six questions, including "can I book here?" → no
```

Separate pages: </area/> hub plus 8 articles, </about/>, </contact/>, </en/>. There are no standalone room or access pages — that content lives on the one-pager, so the site never competes with itself for the same search.

INFORMATION

Hero. 藍 indigo ground, 朱 vermilion reserved exclusively for booking actions, Noto Serif JP headings. The wave pattern behind is 青海波.

INFORMATION

エリアの代表的な宿 — ホテルマーキュリー浅草橋

外観

浅草橋駅から徒歩1〜2分、シングル中心の全56室。24時間対応のフロント、全館Wi-Fi、館内に食事処。出張にも、東京観光の拠点にも使われている、この街らしいビジネスホテルです。ここでは公式の案内文ではなく、泊まる前に知っておくと判断しやすい点を中心にまとめます。

都営浅草線 浅草橋駅 A4出口から徒歩1分／JR総武線 東口から徒歩2分

全56室（シングル44・ダブル6・ツイン6）

24時間フロント／荷物預かり／喫煙ルームあり

全客室・共用部ともWi-Fi対応、館内に食事処

項目	内容
エリア	東京都台東区 浅草橋（JR総武線・都営浅草線）
客室数	全56室 — シングル44室・ダブル6室・ツイン6室
フロント	24時間対応（地階／らせん階段の先）
設備	全館Wi-Fi、冷蔵庫、薄型テレビ、デスク、エアコン
食事	館内の食事処。朝食はドリンクバー付き、素泊まりプランもあり
空港	羽田 約40分／成田 約70分（いずれも乗り換えなし）

#information — the property in plain terms, then a facts table. Written as a review, not as a brochure.

客室 — 3タイプ

シングルが主力の構成です。同じタイプでも階や位置で印象が変わるので、静かさを優先するなら予約時に希望を書いておく通ることがあります。

シングルルーム

全44室 1名 この宿の主力

出張とひとり旅の基本形。ビジネスホテルらしいコンパクトな部屋で、駅からの近さと価格に予算を寄せたいときに向いています。デスクとWi-Fiは全室。

空室を見る

広告

客室写真 — シングル

ダブルルーム

全6室 2名 費用を抑えたい2名

2名で1室を分けるより費用を抑えられる構成。室数が少ないため、週末や行事の日は早めに埋まります。

空室を見る

広告

客室写真 — ダブル

ツインルーム

全6室 2名 荷物が多い2名

ベッドが分かれているぶん、荷物を広げやすいタイプ。問屋街での買い出しや、友人同士の旅行で選ばれます。こちらも6室のみ。

広告

客室写真 — ツイン

部屋を選ぶときの実務的な話

予約サイトの写真は代表室のものです。角部屋や上階を強く希望するなら、備考欄に書いたうえで、確約ではない前提で構えておくのが現実的です。

#guestroom — three room blocks with alternating image sides, each with its own booking button, mirroring the per-room RESERVATION buttons on the shibuyahotel pages. Patterned boxes are image slots awaiting photography.

アクセス — 両空港から乗り換えなし

浅草橋には駅が2つあります。JR総武線と都営浅草線。この2本が重なっているおかげで、空港からも都心からも乗り換えが少なく済みます。

出発地	経路	所要の目安
羽田空港	京急線～都営浅草線 直通	約40分
成田空港	京成線～都営浅草線 直通	約70分
東京駅	JR山手線 → 秋葉原 → JR総武線	約15分
新宿駅	JR総武線 直通	約20分
上野駅	JR山手線 → 秋葉原 → JR総武線	約15分
秋葉原駅	JR総武線 直通	約5分
浅草	都営浅草線 直通	約5分
東京ドーム（水道橋）	JR総武線 直通	約10分

- JR総武線 浅草橋駅 — 東口から江戸通り方面へ。ホテルの多い一帯は徒歩2分ほど。
- 都営浅草線 浅草橋駅 — A4出口が最寄り。地上に出てすぐ江戸通りです。

空港からの行き方を詳しく →

#access — the airport table is the strongest commercial argument this property has, so it gets a full section rather than a footnote.

周辺 一歩いて行ける範囲

観光地ではなく、その少し手前。浅草橋はどこへ行くにも一歩手前にあります。

行き先	行き方	目安
浅草寺・雷門	都営浅草線 2駅	約5分
東京スカイツリー	都営浅草線 直通	約6分
秋葉原	JR総武線 1駅	約5分
両国国技館・江戸東京博物館	JR総武線 1駅	約3分
隅田川テラス・柳橋	徒歩	約5分
蔵前	徒歩／都営浅草線 1駅	約15分／2分

問屋街と人形店 — この街だけの買い物

江戸通り沿いには久月、吉徳大光、秀月といった人形専門店が並びます。1月から3月は雛人形、4月から5月は五月人形が主役で、買う予定がなくてもショーウィンドウを眺めて歩けます。

駅の周囲は問屋街でもあります。紙袋・ラッピング・製菓資材のシモジマ、ビーズとアクセサリパーツ、造花、店舗什器。一般客が入れる店が多く、handmade や開業準備の 買い出し客が日常的に訪れます。

[人形の街を歩く →](#)

[問屋街の歩き方 →](#)

#sightseeing and #shopping. The doll district and wholesale streets are what make Asakusabashi searchable; the official Tabist page does not use them at all.

An area article — the Sumida riverside walk, with a route table.

Mobile. A sticky booking bar appears after the first screen and hides near the footer.

4.2 Booking wiring

Every booking link on the site is generated by one function, so a network change or a new tracking code is a one-line edit and no link can be added without its disclosure label.

- **Deep link** — `booking.tpx.li/<code>`, 44 instances, every one carrying `rel="sponsored noopener"`, a 広告 badge, and a `sub_id` naming its position (`hero`, `rail`, `room-single`, `direct`, `faq`, `sticky`, `area-<slug>`, `en`). After launch those sub-IDs tell us which placement actually converts.
- **Booking.com widget** — `trs=533368`, `promo_id=9240`, `campaign_id=84`, `shmarker=416241.HotelMercuryAsakusabashi`. Marker 416241 is your Travelpayouts marker, as on the

other hotel pages; the sub-marker separates this property's earnings.

- **Vertical RESERVATION rail** pinned to the right edge on desktop, replaced by the sticky bar on phones — the one CTA that is always on screen.

Outstanding: the deep-link code is still the placeholder `PENDING-MERCURY`. Once the Travelpayouts link for this property exists, it drops into one line.

4.3 How the build protects itself

The generator refuses to produce a site that reintroduces the original problem. It fails the build if any page contains `489.jp`, `e-concierge`, the hotel's phone or fax number, `reserve@hotelmercury`, or the word 公 式 in a title, heading or social preview.

```
$ python build.py
built 13 pages -> dist
booking links: 44
clean: no banned identity strings
```

Someone editing the copy in six months cannot quietly put the site back into the position that broke it.

4.4 Files

File	Role
<code>build.py</code>	Layout, booking helpers, structured data, the safety guard
<code>content.py</code>	All copy. Area articles are a list — adding one is a dict entry
<code>assets/css/site.css</code>	The entire design. Colour and type tokens at the top
<code>assets/js/site.js</code>	Mobile menu and sticky bar. 35 lines, no libraries
<code>dist/</code>	Output — this is what gets copied to the server

5. Images

Every image position is a labelled slot with a fixed aspect ratio, so photography drops in later without touching layout. For this local preview they render as a 青海波 wave pattern rather than grey boxes.

The Travelepayouts photo route is closed. Travelepayouts retired Hotellook; the lookup, hotel-photos and image-CDN endpoints all return 404 now, with or without an API token — the token itself is still valid, the flight endpoints answer normally. So the live site needs one of:

1. **Own photography** — Asakusabashi is a ten-minute walk end to end. An afternoon produces the doll shops, the wholesale streets, the river, the station exits. This is the option that also differentiates us from every OTA listing, which all use the same supplied hotel photos.
2. **Free-licence images** — Wikimedia Commons and similar, with attribution, for the area sections.
3. **The widget carries the room photos** — the Booking.com search box shows the property's own licensed imagery inside its frame, which covers "what does the room look like" without us hosting anything.

Reusing the old site's photos is not an option: they are the hotel's property, and the point of this rebuild is to stop borrowing the hotel's identity.

6. The blog layer — how this becomes a site that ranks

The hotel page converts; it does not attract. Search traffic for a single budget property is small and owned by the OTAs. The traffic is in the *region*: people deciding where in Tokyo to stay, how to get in from the airport, what Asakusabashi even is. That is what the blog is for.

6.1 Where it sits

WordPress in a subdirectory: `hotelmercury.jp/blog/`, with the static one-pager staying at the root. A subdirectory keeps every article's authority on the same host as the money page. A subdomain splits it, which is why the shibuyahotel subdomain pages have no blog at all.

Operationally that means one PHP pool and one database on the box, serving only `/blog/` — the homepage and area pages stay static files. If we would rather not run WordPress at all, the eight area articles already prove the alternative: they are static pages from the same generator, and adding a ninth is a dictionary entry. **Recommendation: start static, add WordPress when the publishing volume justifies a CMS or when someone other than us needs to post.**

6.2 What to write — clusters, in priority order

Cluster	Example targets	Why
Stay-decision	浅草橋 ホテル 安い／駅近／浅草橋 vs 浅草 どっちに泊まる／浅草橋 一人旅 宿	Closest to booking intent. Two are already written.
Airport & transit	羽田空港 浅草橋 アクセス／成田 浅草橋 直通／深夜着 東京 泊まる	High volume, evergreen, and it is this property's genuine advantage.
The district	浅草橋 人形 店／問屋街／ビーズ 浅草橋／シモジマ 本店	Low competition, strongly local, brings the craft and handmade audience.
Walks & itineraries	隅田川テラス 散歩／蔵前 カフェ／浅草橋 から 浅草 徒歩	Long dwell time, natural internal links to the stay pages.
Events & seasons	鳥越祭／三社祭 宿／隅田川花火 ホテル／雛人形 シーズン	Predictable annual spikes. Publish two months ahead, refresh yearly.
Nearby comparisons	秋葉原／上野／両国／蔵前 に泊まる	Captures searchers who have not yet chosen a neighbourhood.
English	where to stay in Tokyo near Narita express／Asakusabashi guide	Inbound traffic monetises through Booking.com/Agoda at higher rates.

6.3 The post template

Every article follows the same shape, already implemented in the eight built pages: a lede that answers the question in two sentences, two to four sections with a real table or list, a practical tip box, one booking block, and three related links. The booking block is generated, never pasted, so the `rel="sponsored"` attribute and the 広告 label cannot be forgotten.

Cadence that works without risking a spam signal: **4–8 substantial posts a month**, each genuinely useful, rather than a bulk import. Volume on a freshly cleaned expired domain is the one thing we know triggers trouble.

6.4 How the blog feeds the booking

- Every area article links into `/#guestroom` and `/#access` — the money sections.

- Every article ends with a booking block tagged `area-<slug>`, so we can see which *topic* produces bookings, not just which button.
- The hotel one-pager links out to the articles, so the internal graph runs both directions and the homepage is not a dead end.

7. Getting it live

1. **Travelpayouts code** for this property; drop it into `BOOKING["url"]`.
2. **Photography** — at minimum the hero, the exterior and the three room slots.
3. **Hestia site** on the box, static nginx template, www alias removed, Cloudflare-proxied record and Origin certificate, once the domain is pointed at our Cloudflare.
4. **Copy** `dist/` into the docroot. There is nothing else to install.
5. **Redirects**, preferably as a Cloudflare rule rather than server config: `/guide/ → /#guestroom`, `/areaguide/ → /area/`, `/restaurant/ → /#restaurant`, `/access/ → /#access`; and **410 Gone** for `/page9596/`, `/_templates/*`, `/_administrator/*` — the scraper's demo pages need to leave the index, not redirect into it.
6. **Search Console + Bing** property for the domain, fresh sitemap submitted, then watch which of the area clusters moves first and write more of that one.

8. Risks worth stating plainly

Risk	Mitigation in this build
Google still associates the domain with the hotel's old official site	New brand, new title, no 公式 claim, disclosure page, area-first content. We are asking to rank for 浅草橋 queries, not for the hotel's name.
Expired-domain abuse signal	The site is substantively different from what the domain used to host, and useful in its own right. The thing policies punish is reusing a domain's history to float thin content; the area guide is the opposite of thin.
Publishing volume outrunning quality	No bulk imports. Measured cadence, original writing, per-post review before publishing.
Hotel or Tabist objects to the page	Nothing claims affiliation, the disclosure is explicit, and no contact details of theirs appear. We send them bookings.
Affiliate programme rules	Every link is labelled 広告 and marked <code>rel="sponsored"</code> at generation time, satisfying both Google and the Japanese disclosure requirement.

9. Open items before launch

- **Travelpayouts deep link** for this property — the one value the whole build is waiting on. Sub-marker is set to `416241.HotelMercuryAsakusabashi`; say if you want it named differently.
- **Photography** — shoot the area, licence it, or launch with area-only imagery and let the widget carry the room photos. My preference is a half-day shoot, since it is also what makes us look different from every OTA listing.

- **Site name** — 「浅草橋ホテルガイド」 is what is in the build now. Easy to change before the logo and about page are final.
- **Blog ownership** — if your team will be posting, we add WordPress at `/blog/`; if it stays with me, the static generator is faster and safer. This is the only decision that changes the stack.
- **DNS** — point the domain at our Cloudflare and I will have it live the same day.

Local build, 23 September 2026. Preview: `python build.py && python -m http.server 8787 --directory dist` from `server-build/apps/hotelmercury/`. Screenshots in this document are of that build; image areas shown as patterned panels are the slots awaiting photography.
